Innovators in MRI Patient Care

Alarms You Can Trust!

TRU*SENSE* MOTION TRACKING

Adaptively adjusts for environmental changes while sensing the speed and direction of an approaching threat to determine the threat's validity.

GRAPHICAL TOUCHSCREEN INTEL

Using intuitive signs and graphical pinpoint threat locations, the RALU quickly helps MRI Staff find, remove, and log the ferrous Zone IV threat.

PLUG & PLAY INSTALLATION

The IRadimed FMDS will not require any drilling or special tools to install. Simply plug the system in and wirelessly connect to the RALU.

The World's First Smart FMD

Other FMDS on the market contribute to alarm fatigue by only identifying IF there is ferrous metal nearby. IRadimed's TruSense technology identifies ferrous metal AND the direction and speed it is headed for fewer false alarms.
